

PRESENTER SCRIPT

The live demo — talk track

~5 minutes · two live calls · three curveballs · one automatic confirmation. Your DOB on file: **5 January 1982**.

Pre-flight (2 min before)

proxy.py running → badge reads "Databricks ✓ Salesforce ✓ live" · warm-up call done if warehouse was idle · mic allowed · volume up
· Reset pressed · tier on G

0 15 SEC · FRAME IT

Set the stakes

"Everything you're about to see is live. A real voice agent, a real query into Databricks, a real case created in Salesforce. I'm playing me — the Gold member you just met. Watch the right-hand side as the systems do the work."

1 10 SEC · PRESS TRIGGER

The disruption

"Ops has just flagged VA838 as delayed. Here's the difference: I don't call Virgin. Virgin calls me."

2 ~90 SEC · TAP THE ORB

Call 1 • The delay

HANNAH...

YOU SAY...

Greets you, asks for your date of birth

Curveball 1 Flub it: "Ah... 14th of June, 1984?"

Challenges — "that doesn't quite match what I have"

"Oh sorry, you're right — 5th of January, '82."

Verifies → reads the member (**point: card 1 lights — "that's a live SQL query into Databricks"**) → explains the delay, sends the lounge pass

Curveball 2 "Šta hoćeš?" (Serbian) — she takes it in stride → "Ha — force of habit. English is fine." Wrap up politely.

To the room: "Identity checked, member recognised, lounge sorted — and she took the language switch in stride. Now watch it get worse."

3 5 SEC · PRESS ESCALATE

Flight cancelled

"The delay just became a cancellation. This is the moment loyalty is won or lost."

4 ~2 MIN · TAP THE ORB

Call 2 • Cancellation + rebooking

HANNAH...

YOU SAY...

Apologises, explains the cancellation

Curveball 3 "Honestly, this is a nightmare. Just put me through to a real person."

Deflects with a fix ("give me thirty seconds...")

Optional: push once more — she deflects again. Then: "...fine, go on then."

Offers the options: **VA840 tonight 9:15 PM** or **VA842 tomorrow 7:50 AM**

△ **Always pick the morning:** "Let's do the morning flight."

Confirms + **hotel because you're Gold** (PARKROYAL), locks it in (**point: card 2 lights — a real Service Cloud case**) → closes with "confirmation on WhatsApp the moment we hang up"

"Great — thanks Hannah." → **press End call**

The kicker

The confirmation lands by itself: **VA842 · 7:50 AM · hotel booked & paid**. Let it breathe, then:

"Two calls, one hang-up. No app, no hold music, no queue. I said what was wrong in my own words — and the airline already knew me. That's the difference between a phone menu and a conversation."

→ then into the ElevenLabs platform (Tests → Past Runs → Evals → Procedures) → the architecture slide.

If things go sideways

- **Voice won't connect**

→ left rail → Fallback mode → orb plays the recorded calls; narrate over them.

- **Badge says proxy offline**

→ demo flows on cached data — don't claim "live", say "synthetic here; the live build runs on my machine".

- **Hannah says something odd**

→ smile: "she's got a mind of her own — that's why we have evals." (Genuinely good segue.)

- **A curveball flops**

→ skip it, never repeat it. The flow carries the demo; one curveball per call is plenty.
