

CONVERSATION EVALUATION

Evaluation criteria

Applied automatically to every conversation in production and in test simulations — so quality is measured, not assumed.

1 Identity verified

The agent verified it was speaking with the correct Velocity member (confirmed a detail such as surname/DOB) before sharing or changing any personal booking information.

2 Disruption moved to a resolution

The agent moved the disruption toward a concrete resolution — a rebooking, refund, or clear next step — rather than leaving the caller without an outcome.

3 Entitlement accuracy (no over-promising)

Any perk or gesture the agent offered (lounge, hotel, upgrade, refund) matched the member's tier entitlement and was not invented or over-promised.

4 Warm Australian tone

The agent maintained a warm, empathetic and natural Australian tone throughout — never robotic or menu-like.

5 Graceful human handoff

If the caller was distressed or the request was out of scope, the agent offered a graceful warm handoff to a human rather than refusing or looping.

Each criterion is scored per conversation by the analysis model and surfaced in the Analysis dashboard, giving a continuous, auditable read on agent quality across the metrics that matter to guest care.
