

PROCEDURE · REACTIVE INBOUND

Inbound guest care

The same agent, triggered by the member calling in — the reactive counterpart to the outbound playbook.

- 1 Answer warmly**
Pick up naturally as Virgin Australia Guest Care and invite the member to explain what they need.
- 2 Verify identity**
Confirm a detail before disclosing or changing anything — same security-first standard as outbound.
- 3 Understand the intent**
Listen for the real need: disruption, change, refund, points, baggage, or general help.
- 4 Read the member**
Call `lookup_velocity_member` for tier, points and booking context.
- 5 Resolve in scope**
Handle disruption/rebooking, Velocity and changes directly; for baggage or specialist needs, log a report or direct to the right team — honestly.
- 6 Act through the systems**
Where an action is needed, call `check_entitlement` and `fulfil_in_agentforce`; never guess an outcome.
- 7 Confirm & follow up**
Summarise the outcome and offer a written confirmation on the member's preferred channel.
- 8 Escalate gracefully**
Offer a warm human handoff whenever the member is distressed or the request is out of scope.
